

NEW JERSEY SECTION

June 26, 1991. Russ Leaf, 1st Vice President, welcomed everyone to the Cherry Hill meeting and then introduced Homer Piroeff, President of General Highway Products, our host for this presentation. Homer then opened with a 15-minute video presentation on Polycarbonate Signals. The video presentation showed tests that were conducted by General Electric Company at their Wind Tunnel Facility for the McCain Polycarbonate Signal. These signals were tested for high wind velocity and rain penetration of the optical lens. After a discussion, Anthony Still and Michael Piroeff explained General Highway Products service plan and the stock program which is at their two facilities.

Russ Leaf opened the regular meeting after lunch and introduced Executive Director Harold Glerum, who explained the aspects of the 1992 Conference in Cherry Hill.

Attending the meeting were many members and spouses who will be on the conference committee and also many commercial members who will participate in the '92 conference. Anyone interested in being on the '92 conference committee, please contact me. We will be having a committee meeting in late October.

Carmine L. Guagenti, Director
